

Are you passionate and thrive in an entrepreneurial environment ?

Mobbot is a start-up based in Fribourg, Switzerland, providing unique IoT solution to minimize the climate impact of the construction industry.

To strengthen our creative and dynamic team in Fribourg we are seeking a young and motivated intern:

Data Science Intern

In this role you will tackle the state-of-the art challenges of the construction industry and analyse concrete spraying data to minimize use of concrete for tunnel construction.

Responsibilities

- Analyse big dataset to identify trends and patterns
- Explore data to diagnose failures, parameter setting and operator behaviour
- Explore the potential of algorithms and methods for diagnostics and prognostics applications to optimize spraying parameters and reduce concrete waste

Education/Qualifications

- Master degree in Mathematics, Data Science, Computer Science or equivalent
- Data science, Analytics, Data processing pipeline
- Python
- AWS Cloud

What we offer:

- Dynamic environment and highly motivated team
- Paid internship
- Rapid decision process
- Flexible work hours and workplace
- Your job will have a significant impact for our customers' success
- Code to make a significant climate impact !

Do you want to join a startup to get the first professional experience and code to save the planet, check out here:
